

The RPM Tachometer provides a clear digital display of rotational speed (RPM), enabling fast and accurate monitoring of rotating equipment.

The tachometer also features convenient reference formulas for calculating encoder frequency from RPM and pulse-per-revolution (PPR) values, as well as peripheral speed from pulley diameter and rotational speed.

Key Features

- Compatible with Rotech Systems programmable encoders
- Clear LED RPM display
- Accurate real-time speed indication
- Simple setup and operation
- Robust handheld design for industrial environments
